

Riscure Workshop 2019

12th Annual Riscure event for driving your security forward

November 6, 2019
Tokyo, Japan

Wednesday November 6th

Workshop Program – 10.00 – 17.00

- Lunch Included
- Maximum 30 attendees

Automation, Cloud and Automotive Security

We are pleased to invite you to our annual Riscure Workshop where we will present our latest development in embedded systems security test tooling like Inspector and True Code. This year our focus is on **automation**, artificial intelligence, efficiency, moving **into the cloud** and **Automotive Security**.

This workshop is intended for developers, security evaluators and researchers focused on hardware security testing, government organizations seeking to analyze threats posed by state-of-the-art side channel attacks or fault injection, Automotive Security Experts and Riscure tools customers. The workshop is focused on knowledge rather than being a commercial event. Attendance is free of charge (maximum 2 attendees per organization).

Looking forward in meeting you in Tokyo

Location in Tokyo

• TBA

• TBA

One-day Program (Preliminary)

- What's Hot & What's Happened – Our CEO insight in trends for the near future in automotive
- Introduction in ECU testing against logical and physical attacks:
 - Attacking Autosar
 - UDS Attack
 - ASIL-D: Safety is not Security
- Fault Injection (FI) – Automatically Inject Countermeasures in Software
- Deep Learning – Neural Network Model Assessment for Side-Channel Analysis
- Simulation – Check Side-Channel Analysis (SCA) and Fault Injection (FI) resistance during development
- Inspector in the Cloud 
- Efficient Code Evaluation – with True Code (TCAT)
- Inspector releases and tools updates

More to be announced later...
